Outlook

- Demand for Suominen's products is evaluated on the basis of customer contracts and use forecasts provided by the customers. The general economic situation in Suominen's main market areas is still soft and no signs of demand recovery is visible for the company's products. For this reason, no major changes can be seen in sales volumes from the 2009 level.
- Raw material prices stabilised at the end of 2009, however, prices are expected to rise in 2010. The risk of strong fluctuations in prices is larger than usual due to the economic uncertainty.
- Suominen will focus on improving profitability and promoting sales, while continuously strengthening its capital structure.
- The Stairs to Top enhancement programme will be continued throughout the Group, and is expected to improve Suominen's competitiveness.
- Suominen's operating result is estimated to be equal to the 2009 level.
